PROFESSIONAL SUMMARY

Data analyst experienced in turning customer and operational data into reusable datasets, analytical models, and decision-support tools. Combines SQL/Python analysis, experimentation, and business intelligence to explain performance drivers and help stakeholders act on findings.

EXPERIENCE

Jambo **San Francisco, California**
Data Analyst *Jan 2025 - Aug 2025*

- Built **customer journey datasets** from **100K+ product events** across SQL and NoSQL sources, linking onboarding, feature adoption, and return behavior for funnel and cohort analysis.
- Identified retention differences across onboarding and engagement cohorts, informing targeted product and marketing interventions that increased **30-day retention from 22% to 53%**.
- Managed acquisition campaigns and designed geo-split and multivariate tests across bids, creatives, and audiences; applied regression-based lift analysis to **reduce CPC by 27%** while maintaining conversion volume.
- Built a **customer lifecycle reporting workflow** with shared acquisition, activation, and retention KPIs, translating stakeholder questions into SQL reporting and Power BI dashboards used by **3 teams in weekly reviews**.

Mayacrew **Seoul, South Korea**
Business Intelligence Analyst *May 2024 - Aug 2024*

- Built **customer segmentation models** across **250K+ records** using Python/SQL and purchase, conversion, and engagement behavior, supporting targeted campaigns that **improved engagement by 20%**.
- Developed **acquisition, retention, and segment ROI dashboards** with Power BI, DAX, and Power Query, cutting recurring reporting time by **40%** and supporting budget shifts toward higher-return B2B segments.
- Standardized customer and campaign data into **reusable SQL datasets**, reducing duplicate analysis and giving leadership consistent metrics for weekly performance reviews.

Pom Education **Seoul, South Korea**
Deputy Team Lead & Instructor *Jul 2019 - Feb 2022*

- Built **Excel performance dashboards for 1,500+ students**, connecting attendance, assessments, and retention to identify learning gaps and inform instructional changes that improved average performance by **26%**.

SELECTED PROJECTS

Athlete Performance Scoring | Sogility
Python, Data Modeling, Dashboard Development

- Redesigned scoring across **40+ assessments**, applying direction-aware normalization, percentile benchmarks, and small-cohort smoothing to produce comparable **30-99 performance scores**.
- Built a **relational data model and scoring pipeline** connecting athlete profiles and historical assessments to a dashboard for peer benchmarking and tracking progress over time.

Packaging Standardization | BabyShip
Python, Gurobi, Integer Programming

- Built an **integer programming model** evaluating **43 candidate boxes for 17 products**, balancing packaging variety against dimensional-weight shipping requirements.
- Identified a **7-box configuration**, reducing variety by **59%** versus one box per product while limiting the modeled dimensional-weight increase to **6.5%**.

EDUCATION

Purdue University **West Lafayette, IN**
M.S. Business Analytics & Information Management | GPA: 3.83/4.00 Aug 2026
B.S. Business Analytics & Information Management | GPA: 3.85/4.00 Dec 2024

SKILLS

Programming and Data: SQL, Python (pandas, NumPy, scikit-learn), ETL, Relational Data Modeling, Data Validation
Analytics and Modeling: Cohort/Funnel Analysis, Segmentation, A/B Testing, Regression, Integer Programming, Gurobi
BI and Reporting: Power BI (DAX, Power Query), Excel, Tableau, Dash, Plotly, KPI Development

INTERESTS

Tennis (Roger Federer fan, attempting his one-handed backhand, forehand grip, and even the same racket) | Burger Hunting (trying a new burger in every city I visit, across the U.S. and around the world)
