SUMMARY

Data scientist and analyst experienced in Python and SQL across the full analytics lifecycle—from data wrangling and exploratory analysis through hypothesis testing, predictive modeling, validation, and deployment. Background applying regression, classification, clustering, ensemble methods, time series forecasting, and optimization to large behavioral and customer datasets in retail-adjacent and franchise-style business contexts. Strong collaborator with engineering and business teams, focused on scalable analytics products and clear stakeholder communication.

SKILLS

Python, SQL, predictive modeling, machine learning, regression, classification, clustering, ensemble methods, XGBoost, scikit-learn, time series analysis, optimization, hypothesis testing, EDA, data wrangling, Power BI, Tableau, AWS, Azure, ETL, Git, statistical analysis, matplotlib, seaborn

EDUCATION

Purdue University, Daniels School of Business West Lafayette, IN
Master of Science in Business Analytics and Information Management August 2026
Relevant coursework: machine learning, statistical modeling, optimization, data mining

Purdue University West Lafayette, IN
Bachelor of Science in Business Analytics and Information Management, GPA: 3.85/4.0 December 2024
Certifications: Google Data Analytics Professional, Microsoft Azure AI Fundamentals

EXPERIENCE

Jambo California
Data Analyst (Remote) Jan 2025–August 2025

- Built production Python and SQL analytics pipelines from 100K+ behavioral user events, supporting churn analysis, cohort insights, and retention initiatives that improved outcomes by 31%.
- Led hypothesis testing through geo split experiments and multivariate bid tests, applying regression-based lift analysis to validate incrementality and improve customer acquisition efficiency by 27%.
- Deployed KPI monitoring dashboards and automated reporting products on AWS-backed workflows, reducing manual insight generation time by 60% for cross-functional growth stakeholders.

Mayacrew Seoul, South Korea
Data Analyst May 2024–August 2024

- Developed customer segmentation models using Python and SQL on 250K+ records, applying clustering and predictive techniques that improved campaign engagement by 20%.
- Delivered data visualizations and executive reporting on acquisition and retention KPIs, translating analytical results into business recommendations for non-technical stakeholders.

ACADEMIC PROJECTS

Bankruptcy Risk Prediction West Lafayette, IN
Purdue Analytics Competition 2024

- Built an XGBoost classification model on messy financial ratio data with full EDA and validation workflow, achieving mean AUC 0.907 and placing 3rd of 53 teams.

NYC Taxi Fleet Optimization West Lafayette, IN
MGMT 590, Purdue University 2025

- Applied optimization and simulation techniques to position 13,000 vehicles across 263 zones using demand forecasting, projecting \$12.4M in annual operational improvement.

Graduate Data Science Researcher*The Data Mine, Purdue University*

West Lafayette, IN

August 2025–Dec 2025

- Developed predictive reorder-risk models and interactive analytics adopted by three cross-functional teams, supporting model validation and deployment for supply chain planning.

Utilization Analysis and Forecasting Project*Applied Materials Inc.*

West Lafayette, IN

January 2024–May 2024

- Built ensemble time series forecasting models (Random Forest, XGBoost) on large operational datasets, improving utilization forecast accuracy by 13% through rigorous model development and validation.
