

Byungjoo (Daniel) Kang

West Lafayette, IN | Open to Chicago, IL | 765-543-4969 | kang531@purdue.edu | LinkedIn | Portfolio

SUMMARY

Analytics professional with Amazon Web Services cloud analytics experience, specializing in Python modeling, SQL, and machine learning on large population datasets. Experienced in data extraction, customer segmentation, and statistical analysis supporting marketing, retention, and risk-oriented use cases. Skilled in developing predictive models and business intelligence solutions, delivering descriptive, predictive, and prescriptive insights to cross-functional stakeholders through clear presentations and documented analytic workflows.

SKILLS

Amazon Web Services, Python modeling, SQL, predictive modeling, segmentation, statistical analysis, model development, data extraction, descriptive analysis, prescriptive analysis, data documentation, business intelligence, Power BI, ETL, Excel, regression analysis, XGBoost, scikit-learn

EDUCATION

Purdue University, Daniels School of Business West Lafayette, IN
Master of Science in Business Analytics and Information Management August 2026
Relevant coursework: statistical modeling, machine learning, optimization, data mining

Purdue University West Lafayette, IN
Bachelor of Science in Business Analytics and Information Management, GPA: 3.85/4.0 December 2024
Certifications: Google Data Analytics Professional, Microsoft Azure AI Fundamentals

EXPERIENCE

Jambo California
Data Analyst (Remote) Jan 2025–August 2025

- Performed data extraction and statistical analysis on 100K+ user events using Python and SQL, identifying churn drivers through funnel and cohort segmentation to support retention initiatives that improved outcomes by 31%.
- Developed predictive and prescriptive test designs via geo split experiments and multivariate bid tests, applying regression-based lift analysis to validate incrementality and improve customer acquisition efficiency by 27%.
- Built SQL-based analytics pipelines and KPI monitoring dashboards on Amazon Web Services, formalizing repeatable reporting processes and reducing manual insight generation time by 60% for cross-functional marketing stakeholders.

Mayacrew Seoul, South Korea
Data Analyst May 2024–August 2024

- Developed predictive customer segmentation models using Python and SQL on 250K+ records, enabling targeted marketing strategies that improved campaign engagement rates by 20%.
- Delivered business intelligence solutions and executive presentations on B2B acquisition and retention trade-offs, reducing manual reporting time by 40% and shifting budget toward highest-ROI segments.

ACADEMIC PROJECTS

Bankruptcy Risk Prediction West Lafayette, IN
Purdue Analytics Competition 2024

- Built an XGBoost predictive model for financial risk scoring using Python on messy ratio data, achieving mean AUC 0.907 and placing 3rd of 53 teams in a graduate analytics competition.

Graduate Data Science Researcher

The Data Mine, Purdue University

West Lafayette, IN

August 2025–Dec 2025

- Developed reorder-risk models and segmentation logic for SKU prioritization, deploying interactive analytics adopted by three cross-functional teams for supply chain planning.
- Documented data extraction and modeling workflows for inventory performance monitoring, enabling repeatable descriptive and statistical analysis across operational stakeholders.

Utilization Analysis and Forecasting Project

Applied Materials Inc.

West Lafayette, IN

January 2024–May 2024

- Built ensemble ML models (Random Forest, XGBoost) combining time series and macroeconomic indicators on large equipment utilization datasets, improving forecast accuracy by 13% for capacity planning stakeholders.
- Delivered descriptive analytics and forecasting insights through dashboards and documented analysis for operations and planning teams.
