

Byungjoo (Daniel) Kang

West Lafayette, IN | 765-543-4969 | kang531@purdue.edu | [LinkedIn](#) | <https://daniel-kang-vs.github.io>

PROFILE

Business Intelligence and Data Analyst specializing in data-driven decision support and AI-assisted analytics, leveraging Python, SQL, Excel, and Power BI to simplify operational and strategic decision-making. Skilled in end-to-end analytics pipelines, statistical modeling, and executive-level reporting across manufacturing, healthcare, and retail environments. Strong communicator translating complex analyses into actionable business insights for technical and non-technical stakeholders.

Skills: SQL, Python, Power BI, ETL & Data pipelines (AWS, Azure), Tableau, Excel, PowerPoint

EDUCATION

Purdue University, Daniels School of Business

West Lafayette, IN

Master of Science in Business Analytics and Information Management

August 2026

- **Certifications:** Google Data Analytics Professional, Microsoft Azure AI Fundamentals

Purdue University

West Lafayette, IN

Bachelor of Science in Business Analytics and Information Management, GPA: 3.85/4.0

December 2024

PROFESSIONAL EXPERIENCE

Jambo

California

Data Analyst (Remote)

Jan 2025 - August 2025

- Engineered analyses to identify key drivers of user churn through funnel and cohort analysis and developed end-to-end ETL analytics pipelines using Python and SQL from behavioral data from 100K+ user events, contributing to a 31% improvement in retention initiatives.
- Designed and analyzed geo split experiments and multivariate bid tests, applying regression-based lift analysis to validate incrementality and improve customer acquisition efficiency by 27% while maintaining conversion volume.
- Developed and deployed AI-assisted KPI monitoring dashboards and SQL-based analytics pipelines to automate insight generation and streamline acquisition, engagement, and retention decision-making, reducing reporting time by 60%.

Mayacrew

Seoul, South Korea

Data Analyst

May 2024 - August 2024

- Developed predictive customer segmentation models using Python and SQL to identify high-value and at-risk user groups across 250K+ customer records, enabling targeted marketing strategies that improved campaign engagement rates by 20%.
- Built a Python dashboard for B2B engagement KPIs and advised senior leadership on acquisition and retention strategy through clear trade off scenarios, reducing manual reporting time by 40% and shifting budget toward the highest ROI B2B segments.

Pom Education

Seoul, South Korea

Deputy Team Leader & Instructor

July 2019 - Feb 2022

- Led student acquisition and consultation efforts by analyzing enrollment funnel and parent decision drivers, contributing to over 1000% growth in student enrollment in two years.
- Built and maintained a performance tracking system for 1,500+ students using Excel dashboards, analyzing progress, retention, and outcome metrics to identify learning gaps and optimize instructional strategies, improving average student performance by 26%.

ACADEMIC PROJECTS

Graduate Data Science Researcher

West Lafayette, IN

The Data Mine, Purdue University

August 2025 – Dec 2025

- Built an AI-assisted inventory intelligence system integrating predictive reorder-risk modeling and interactive analytics, simplifying SKU prioritization and enabling faster supply chain planning decisions.
- Designed and deployed interactive dashboard and predictive analytics solutions to track reorder likelihood and inventory performance enabling real-time operational monitoring and data-driven supply chain planning.

Utilization Analysis and Forecasting Project

West Lafayette, IN

Applied Materials Inc.

January 2024 - May 2024

- Diagnosed semiconductor equipment utilization patterns by combining time series analysis with macroeconomic indicators, uncovering leading demand signals and delivering insights through dashboards for operations and planning stakeholders.
- Implemented AI-assisted forecasting models combining machine learning and macroeconomic indicators to simplify semiconductor capacity planning and inventory decision-making, improving utilization forecast accuracy by 13%.
