## WORK EXPERIENCE

### Data Analyst

Jan 2025 - Aug 2025

*Jambo, California (Remote)*

- Built SQL/Python analytics pipelines across 100K+ product events, modeling user, session, acquisition, and conversion data into analysis-ready tables and standardized KPIs for product and growth analytics.
- Identified critical churn drivers through funnel, cohort, and retention analysis, translating behavioral patterns into product interventions that increased 30-day retention from 22% to 53%.
- Designed geo-split and multivariate experiments using regression-based lift estimation to quantify incrementality and optimize marketing allocation, reducing CPC by 27% while maintaining conversion volume.
- Automated Power BI dashboards and SQL-based monitoring across acquisition, engagement, and retention metrics, reducing recurring reporting time by 60% and accelerating performance decisions across product and marketing teams.

### Business Intelligence Analyst

May 2024 - Aug 2024

*Mayacrew, Seoul, South Korea*

- Built Python/SQL customer segmentation models across 250K+ records to identify high-value and at-risk cohorts, informing targeted campaigns that improved engagement by 20%.
- Developed executive acquisition and retention dashboards to quantify segment-level ROI and budget tradeoffs, cutting reporting time by 40% and shifting spend toward higher-return B2B segments.

### Analytics Team Lead & Instructor

Jul 2019 - Feb 2022

*Pom Education, Seoul, South Korea*

- Analyzed lead sources, parent consultation records, trial-class conversions, and re-enrollment patterns to identify key drivers of enrollment; redesigned follow-up workflows and parent communication strategies around high-converting student segments, contributing to 1,000%+ enrollment growth over two years.
- Built an Excel-based performance analytics system for 1,500+ students, integrating attendance, assessment scores, homework completion, and retention data to identify at-risk students and learning gaps; enabled targeted instructor interventions that improved average student performance by 26%.

## EDUCATION

### M.S. Business Analytics & Information Management

Aug 2025 - Aug 2026

*Purdue University | GPA: 3.83/4.00*

### B.S. Business Analytics & Information Management

Aug 2022 - Dec 2024

*Purdue University | GPA: 3.85/4.00*

## PROFESSIONAL PROJECTS

### Shipping Box Optimization (BabyShip) | Python, Gurobi, Integer Programming

Jan 2026 - May 2026

- Optimized assignments across 17 products and 43 candidate boxes, selecting 7 box types while limiting dimensional-weight penalty to 6.5% versus product-specific packaging while cutting packaging SKU variants by 60%.
- Analyzed the cost-efficiency tradeoff between packaging standardization and shipping-weight inflation, quantifying how box-count constraints affect dimensional weight to support a practical packaging strategy.

### Data Analytics & Statistical Modeling (Sogility) | Statistical Modeling, ETL, Data Modeling

Jan 2026 - Aug 2026

- Redesigned Sogility's legacy sigmoid scoring framework by converting heterogeneous raw assessment results into standardized 30–99 performance scores using direction-aware normalization, percentile benchmarking, logistic transformations, recency weighting, and small-cohort smoothing; reduced score volatility by 42% and improved small-cohort consistency by 140%.
- Built an analysis-ready data model integrating athlete demographics, skill categories, raw assessment results, and historical attempts across 40+ soccer performance tests, enabling automated cohort benchmarking and longitudinal performance analysis.
- Translated the scoring methodology into stakeholder-facing dashboards with performance tiers, peer benchmarks, skill-level trends, and progress tracking, enabling coaches and parents to interpret raw testing data and identify athlete development opportunities.

## SKILLS

**Programming & Data:** Python (pandas, NumPy, scikit-learn), SQL, Excel, BigQuery, Stata, PyTorch, Databricks

**BI & Visualization:** Power BI, Tableau, Plotly, Dash

**Analytics:** Regression, Funnel & Cohort Analysis, Customer Segmentation, Forecasting, Optimization

**Data Engineering & Modeling:** ETL, Data Pipelines, AWS, Azure, Predictive Modeling, Integer Programming, Statistical Modeling, Machine Learning
